Annotation Markides (chairman, strategic and international management department, London Business School) contends that the essence of business strategy is to allow a company to create and exploit a unique strategic position in industry, and helps managers zero in on critical choices that lie at the heart of all innovative strategies. He approaches strategic thinking as a creative process, and poses key questions for readers to ask as he guides them through a framework for developing strategic thinking skills.

They may not survive the final battle, but they have to try: for their friends, for the planet, for humanity.

What's worse than being stuck on an alien planet? Being stuck on an alien planet when you've made an enemy of the local tribe King. Okay, so I may have stolen his favorite mishua and snuck away to find my friends. But he should've known better than to forbid me to go. I'm a marine, and we leave no man-- or woman, behind. Besides- putting distance between us is a good thing, especially since I'm sure he's coming after me. We're like fire and gasoline, and spending time near him is like lighting a match and waiting for the explosion. So what if his dark eyes promise more pleasure than I've ever experienced? I'm finding my friends and getting off this planet. Even if this alien king seems to think he owns me. Even if a tiny part of me might like the idea of being owned... by him. "Slow violence" from climate change, toxic drift, deforestation, oil spills, and the environmental aftermath of war takes place gradually and often invisibly. Jillian Landay is no queen of an alien planet like her younger sister, Megan, but she has a successful career as an interior designer. Love and relationships? Totally out of the question. She's not about to get burned again. So how the hell did she end up pregnant for an arrogant alien general? Jonnar Dorayan may be the sexiest alien warrior alive with his intense, blue-violet stare and a scorching touch that sets her body afire, but he's not her type. Yeah, he's the father of her unborn child. And yeah, he saved her life. Twice. But falling for him? Never gonna happen in this galaxy or the next! - There are two things Jonnar enjoys in life: fighting and... well, it involves a willing woman beneath him. Fatherhood was definitely not one of his life's goals. And if he had a choice, he certainly wouldn't have chosen a prickly, stubborn human female as the mother of his child. Jillian is nothing like what he's accustomed to, yet her irresistible curves and astounding strength captivate him. He can't fall in love with her. He's no good for her and she's too good for him. Through a series of studies, the overarching aim of this book is to investigate if and how the digitalization/digital transformation process affects various welfare services provided by the public sector, and the ensuing implications thereof. Ultimately, this book seeks to understand if it is conceivable for digital advancement to result in the creation of private/non-governmental alternatives to welfare services, possibly in a manner that transcends national boundaries. This study also investigates the possible ramifications of technological development for the public sector and the Western welfare society at large. This book takes its point of departure from the 2016 Organization for Economic Co-operation and Development (OECD) report that targets specific public service areas in which government needs to adopt new strategies not to fall behind. Specifically, this report emphasizes the focus on digitalization of health care/social care, education, and protection services, including the use of assistive technologies referred to as "digital welfare." Hence, this book explores the factors potentially leading to whether state actors could be overrun by other non-governmental actors, disrupting the current status quo of welfare services. The book seeks to provide an innovative, enriching, and controversial take on society at large and how various aspects of the public sector can be, and are, affected by the ongoing digitalization process in a way that is not covered by extant literature on the market. This book takes its point of departure in Sweden given the fact that Sweden is one of the most digitalized countries in Europe, according to the Digital Economy and Society Index (DESI), making it a pertinent research case. However, as digitalization transcends national borders, large parts of the subject matter take on an international angle. This includes cases from several other countries around Europe as well as the United States.

This volume provides an accessible scientific introduction to the historical geography of Tropical Pacific Islands, assessing the environmental and cultural changes they have undergone and how they are affected currently by these shifts and alterations. The book emphasizes the roles of plants, animals, people, and the environment in shaping the tropical Pacific through a cross-disciplinary approach involving history, geography, biology, environmental science, and anthropology. With these diverse scientific perspectives, the eight chapters of the book provide a comprehensive overview of Tropical Pacific Islands from their initial colonization by native peoples to their occupation by colonial powers, and the contemporary changes that have affected the natural history and social fabric of these islands. The Tropical Pacific Islands are introduced by a description of their geological formation, development, and geography. From there, the book details the origins of the island's original peoples and the dawn of the political economy of these islands, including the domestication and trade of plants, animals, and other natural resources. Next, readers will learn about the impact of missionaries on Pacific Islands, and the affects of World War II and nuclear testing on natural resources and the health of its people. The final chapter discusses the islands in the context of natural resource extraction, population increases, and global climate change. Working together these factors are shown to affect rainfall and limited water resources, as well as the ability to sustain traditional crops, and the capacity of the islands to accommodate its residents.

Sometimes it's a very fine line between love and hate. Humans were inferior and troublesome creatures, and unlike his fellow warriors, Morocco had no intention of ever mating one. Trust a female again? Never. Not when he knew how easily they could betray you. So why did he care so much about a certain prickly, irritating female who seemed to take great delight in rousing his temper? And his need. Saffron hadn't come to Zerconia to find a mate among these overbearing, overprotective aliens. All she cared about was keeping her sister safe, and now that Sophie had found her mate, well, it was probably time to leave. Except, she couldn't leave without seeing Morocco once more. If only to tell him exactly what she thought of him. Only problem was she didn't know whether she was going to tell him that she disliked him ... Or desired him.
