Through these two books I want to show you as much as possible the completely blueprint where I've worked on for years. It's my library, a collection from which I work, and the many documents that I now use as evidence. This book is a collection of quotations from many books, magazines, newspapers, internet documents and reports from others. Therefore I see this book as a manual / reference book for those interested. It's important to me that finally there is a book where everything that is concealed for us for centuries, is at a glance. What you do with the information and how much it is worth to you to know these things is up to you. Here I simply put those pieces that in my eyes came closest to the truth, and which fitted together like a puzzle. The past has big secrets which still are carefully concealed in the present. By putting the many citations and articles at a glance we see a strong message: Wake up people.

Fifty years ago, in November 1947, Brown & Root helped Kerr-McGee build the first out-of-sight-of-land offshore platform that produced oil. This history puts a human face on the process of technological change. Using the words of many of those who took part in Brown & Root's offshore activities, this book recounts their efforts to find practical ways to recover offshore oil.

As well as in-depth comparative study of the topic from the perspective of leading experts, there are also editorial chapters covering anti-corruption developments affecting Latin America's mining industry; combating corruption in the banking industry - the Indian experience; calculating penalties; risk and compliance management systems; corporates and UK compliance - the way ahead; current progress in anti-corruption enforcement; and finally a global overview. "The comprehensive range of guides produced by GTDT provides practitioners with an extremely useful resource when seeking an overview of key areas of law and policy in practice areas or jurisdictions which they may otherwise be unfamiliar with." Gareth Webster, Centrica Energy E&P Keppel Offshore and Marine was created in 2002 through the integration of three long-established, world-class companies within Keppel Corporation: Keppel FELS, Keppel Shipyard and Keppel Singmarine. The Keppel O&M story offers lessons in practicable, sustainable corporate strategy, and in the management of both adversity and success. It demonstrates the importance of perseverance and the refusal to give up; of managing risk; and of establishing a track record of project delivery ahead of time, within budget and without incident.--From Book jacket.

As "market referees", regulators contribute to the delivery of essential public utilities. Their organisational culture, behaviour, actions and governance are important factors in how they, and the sectors they oversee, perform.

The ultimate reference for selecting, operating and maintaining offshore structures, provides a road map for designing structures which will stand up even in the harshest environments. The selection of the proper type of offshore structure is discussed from a technical and economic point of view.

This book addresses current and emerging challenges facing those working in offshore construction, design and research. Keynote papers from leading industry practitioners and academics provide a comprehensive overview of central topics covering deepwater anchoring, pipelines, foundation solutions for offshore wind turbines, site investigation, geohazards and emerging Australian frontiers. A further 125 peer reviewed papers introduce and analyse the critical challenges of offshore geotechnical engineering in the areas of the keynote subjects as well as piling, caissons and shallow foundation systems. The papers collected in these proceedings report a variety of numerical and theoretical investigations, experimental programs and field experience, with established design methods discussed alongside state-of-the-art practices.

This book introduces a new and powerful approach based on rigorous process simulations conducted with professional simulators like HYSYS to predict the performance of supersonic separators (SS). The book addresses the utilization of SSs for the offshore processing of CO<sub>2</sub>-rich natural gas as an alternative to Joule-Thomson expansion, glycol absorption, membrane permeation and chemical absorption. It describes and analyzes the conventional offshore processing of CO<sub>2</sub>-rich natural gas, discussing the advantages of SS in terms of cost and power consumption. The book offers a comprehensive framework for modeling SS units, describing the physical principles of SS in detail. The thermodynamic multiphase sound speed is also discussed at the light shed by a classical analysis based on the Landau Model of phase transitions. A complete framework is presented for modelling and simulating SS units within HYSYS environment. A special chapter is dedicated to the performance of SSs for removing CO<sub>2</sub> from CO<sub>2</sub>-rich natural gas, taking into account the limitations of CO<sub>2</sub> freeze-out in various scenarios of gas feed in terms of CO<sub>2</sub> content, pressure and temperature.

This publication presents a methodology for planning sustainable supply chain initiatives, consisting of three scopes, each with its appropriate mechanism and background theory. The first one “Acting In” structures organizational practices in a “Framework for Managing Sustainable Supply Chain Practices”. The second scope “Acting Out” compares practices from 32 recognized sustainability leaders from five different industries through a “Benchmarks Practices Bank”. The third scope “Acting Beyond” supports defining and managing a portfolio of sustainable supply chain practices through a “Practices Portfolio Planning Matrix” which provides a list of opportunities for the exchange of knowledge between Germany and Brazil. The methodology significantly supports supply chain decision makers in planning initiatives and visualizing collaboration opportunities within a firm, industry and shared value chain perspective. As companies become more global, challenges also become greater, thus, a more systematic and holistic approach can lead the way for developing more innovative solutions. In der folgenden Doktorarbeit wird eine Methodologie zur Planung von Nachhaltigkeitsinitiativen im Bereich Supply Chain entwickelt, die aus drei Haupthandlungsfeldern besteht und für welche jeweils der theoretische Hintergrund, sowie geeignete Mechanismen aufgezeigt werden. Der erste Bereich, das sog.

„Acting In“, strukturiert organisatorische Tätigkeiten und integriert diese in einen Rahmen, dem „Framework for Managing Sustainable Supply Chain Practices“. Der zweite Bereich - „Acting Out“ - vergleicht verschiedene Verfahren von 32 anerkannten, im Bereich Nachhaltigkeit führenden Unternehmen mit Hilfe der Datenbank “Benchmarks Practices Bank”. „Acting Beyond“ - der dritte Bereich - hilft dabei ein Portfolio mit nachhaltigen Maßnahmen im Supply Chain Bereich zu definieren. Hierfür wird die “Practices Portfolio Planning Matrix” eingeführt, welche gleichzeitig interessante Möglichkeiten zum Wissensaustausch zwischen Deutschland und Brasilien aufzeigt. Die erarbeitete Methodik ist sowohl für die Forschung, als auch für die Anwender im Supply Chain Bereich von großer Bedeutung. Die hier entwickelten Mechanismen unterstützen die Entscheider in den Unternehmen bei der Planung von Nachhaltigkeitsinitiativen im Supply Chain Bereich und verdeutlichen Kooperationsmöglichkeiten auf verschiedenen Ebenen: innerbetrieblich, auf derselben Wertschöpfungsstufe und über die gesamte Wertschöpfungskette hinweg. Da die Unternehmen immer globaler agieren, werden die Herausforderungen größer. Daher kann eine systematischere, ganzheitlichere Herangehensweise ein Ansatz sein, wenn es um die Entwicklung von innovativen Lösungen geht.
