How consciousness and quantum energies affect your genetic expression and the development of disease and chronic health conditions • Draws on cellular medicine, genetics, quantum physics, and consciousness studies to define the real underlying mechanisms of disease and how they can be addressed • Explains how consciousness influences quantum DNA to erase the genetic imprint of illness, allowing your body to remember how to function efficiently and effectively • Shares the author's discoveries that enabled her to successfully heal the cellular dysfunction at the root cause of her cancer, tumors, chronic inflammation, and toxicity • Explores consciousness tools to re-encode DNA and includes detailed scripts for techniques that readers can apply to their own healing journeys Drawing on new advancements in quantum physics, cellular medicine, genetics, and consciousness studies, as well as her own journey of self-healing from a number of challenging health conditions, Althea S. Hawk reveals how you can consciously influence your DNA and re-encode it to improve your health and alter your genetic destiny. Sharing the discoveries that enabled her to successfully heal from her cancer, tumors, toxicity, and inflammatory-related conditions, the author explains how genes are not solely responsible for creating disease. She shows how human physiology interacts with the quantum energies of our external and personal environments and how the resulting information triggers the development and persistence of disease and chronic conditions. We each inherit susceptibilities, but it is our unique experience of these environmental factors, as well as our beliefs, thoughts, and emotions, that alter the way our genes are expressed. Detailing how our DNA is both quantum-energetic and biological-chemical, Hawk explains how your environment and your consciousness influence your quantum DNA, which in turn interacts with your biological DNA. By working directly with energetic information that affects how your quantum and biological DNA communicate, you can alter the expression of your genes by re-encoding the gene sequences on your physical DNA, erasing the imprint of illness and enabling your body to remember how to function properly. Hawk explores consciousness tools and mind-body techniques to re-encode your DNA, such as sound and breathing work, DNA marker removal, recalibration of Akashic information, and cellular communication exercises that readers can apply to their own healing journeys. There has recently been dramatic growth in the medium of radio. However, advertisers and agencies too often still use radio for its basic tactical abilities, leaving the emotional power of the medium untapped. This book is a practical guide to understanding and exploiting the true power of radio as the “brand conversation medium”. Combining theory, listener understanding and practical advice, the authors explore the scale and

effectiveness of radio advertising, how the medium communicates, its role in emerging brand thinking, and best practice for creating better radio advertising. Overviews, summaries, quotations and checklists are featured throughout, as well as case studies from companies in all sectors including Sainsbury's, British Airways, Carphone Warehouse, BT and the British Government.

All engineering structures react with the ground, and most structures make use of materials extracted from the earth. While an engineer cannot be expected to be also an expert geologist, he must have a working knowledge of the subject if his structures are to be economically designed, safely built and safely used. He must also be able to recognise where and when he needs the advice of a specialist. A Manual of Applied Geology is designed as a guide for practising engineers. A team of distinguished engineers and scientists has been assembled to present the basic information which an engineer needs and to explain how best to use this information to deal with problems in his work. Chapters cover general theory, Formation of rocks, their properties and identification, landforms and soils, geophysical methods, maps and other information sources. The particular problems of terrain evaluation, site selection and investigation and common construction problems (including groundwater control, stability, foundations and underground work) are examined and there are chapters on materials and hydrogeology. Aimed principally at the engineer who is meeting geological problems in his everyday work, this generously illustrated volume will also be useful as an introduction to the subject for first degree engineering students
