*Powerful Occupational Therapists* examines the life and times of a small group of occupational therapy leaders and scholars in a post-1950s America, to market their profession as one of increasing importance. Participating in the 1950s rehabilitation, the 1960s equal rights, and the 1970s women's movements, these innovators, being primarily women, aimed to define themselves as having professional and scientific authority that was distinct from the male-dominated medical model. The community of therapists faced challenges such as that of retaining the appearance of being "ladylike" whilst doing "unladylike" tasks. This book describes the personal experiences of 12 differing occupational therapists and it identifies how a group of them strengthened and developed the profession in the face of diverse challenges. This volume would be of interest to those studying occupational therapy, women and medicine and the history of medicine. This book was originally published as a special issue of *Occupational Therapy in Mental Health*.

The profession of occupational therapy has a highly specialised language, but until now there have been no standard definitions of its key terms. Based on the work of the terminology project group of the European Network of Occupational Therapy in Higher Education (ENOTHE), this book selects and defines the core building blocks of occupational therapy theory. Consensus definitions of a wide range of terms are developed through an analysis of published definitions from around the world. Concepts with similar meanings are clustered into groups, and the clusters are then arranged into a conceptual map. The book provides an analysis of what each term means in common usage, how it is used in occupational therapy, and its implications for therapeutic practice. The conceptual framework that emerges represents an important contribution to the profession's understanding of the fundamental concepts of occupational therapy. The consensus definitions presented in this book will facilitate communication between professionals as well as with clients and others, and will be of interest to occupational therapy practitioners, students, educators and researchers. This book is a collection of essays on occupational therapy theory and its application in practice. They represent the reflections, on aspects of occupational therapy, of experts in their own fields who are at the cutting edge of theory development. At the beginning of the twenty-first century, occupational therapists

are beginning to conceptualise occupational therapy as a complex intervention. This book provides the level of detail to support such an understanding. Two chapters discuss the profession of occupational therapy: how it has developed and what is involved in being an occupational therapist. Other chapters explore the idea of occupation from different perspectives, providing detailed analyses of the concept that is central to the profession of occupational therapy. The third type of chapter describes how theory is used in occupational therapy practice, for example, in making decisions or implementing research findings.

This textbook on assessment and outcome measurement is written for both occupational therapy and physiotherapy students and qualified therapists. It begins by defining what is meant by assessment, outcome, evaluation and measurement and discussing the complexity of therapy assessment and measurement, including the challenge of measuring human behaviour and the impact of factors such as task demand and context, including the environment. Methods of data collection (e.g. observation, interview, standardised testing) and sources (e.g. self-report, proxy) for collecting information about clients are then reviewed, and the main purposes of assessment (e.g. descriptive, evaluative, predictive, discriminative) presented. The book then addresses the topics of standardisation, levels of measurement, reliability, validity and clinical utility.

There is a chapter describing and applying models for categorizing levels of function to aid assessment and measurement. The concept of clinical reasoning and reflective practice is then explored. Application of principles is supported through detailed case studies and worksheets and the criteria for test critique and guidelines for choosing a particular assessment approach are discussed.

To respond to the renewed focus by the occupational therapy profession upon occupation, the fifth edition of Activity Analysis and Application has been updated and renamed to reflect this latest emphasis. While Activity Analysis: Application to Occupation, Fifth Edition maintains the sequential process of learning activity analysis, this step-by-step approach now helps students analyze activity for the purpose of optimizing the client's occupational performance. Gayle Hersch, Nancy Lamport, and Margaret Coffey successfully guide students through the development of clinical reasoning skills critical to planning a client's return to meaningful engagement in valued occupations. The authors utilize a straightforward teaching approach that allows students to progress developmentally in understanding both the analysis and application of activity to client intervention. The Occupational Therapy Practice Framework: Domain and Process, with a prominent focus on occupation as this profession's philosophical basis for practice, has been incorporated in the updated forms and explanations of the activity analysis approach. This book examines the occupational therapy paradigm (its focal viewpoint, core constructs, and values) as well as the role of complexity/chaos theory as a scientific framework for occupational therapy research and practice. Unlike other current OT texts, this book uses clinical case examples to illustrate application of proposed changes to make procedures consistent with the latest Occupational Therapy Practice Framework. The reader walks away with a clear grasp of the theoretical principles guiding his or her treatment interventions, the explanations behind those principles, and the applicable intervention for said techniques and procedures. An emphasis on clinical-reasoning skills, including information on different types of reasoning skills as well as the MAPP model of teaching helps the student and clinician translate theoretical principles into practice. The section on specific interventions addresses each of the conceptual practice models according to a consistent chapter template, which enables the reader to apply conceptual practice models in real-world contexts. Preview questions at the beginning of each chapter alert the reader to important concepts in the upcoming text. Critical analysis of the theoretical core provides suggested modifications to increase consistency with the new occupational therapy paradigm.
