The past decade has witnessed a decline in saving throughout the developed world—the United States has the dubious distinction of leading the way. The consequences can be serious. For individuals, their own economic security and that of their families is jeopardized. For society,

inadequate rates of saving have been blamed for a variety of ills—decreasing the competitive abilities of American industry, slowing capital accumulation, increasing our trade deficit, and forcing the sale of capital stock to foreign investors at bargain prices. Restoring acceptable rates of saving in the United States poses a major challenge to those who formulate national economic policy, especially since economists and policymakers alike still understand little about what motivates people to save. In *National Saving and Economic Performance*, edited by B. Douglas Bernheim and John B. Shoven, that task is addressed by offering the results of new research, with recommendations for policies aimed to improve saving. Leading experts in diverse fields of economics debate the need for more accurate measurement of official saving data; examine how corporate decisions to retain or distribute earnings affect household-level consumption and saving; and investigate the effects of taxation on saving behavior, correlations between national saving and international investment over time, and the influence of economic growth on saving. Presenting the most comprehensive and up-to-date research on saving, this volume will benefit both academic and government economists.

Philip Brown is one of the most admired and respected accounting academics alive today. He was a pioneer in capital markets research in accounting, and his 1968 article, co-authored with Ray Ball, "An Empirical Evaluation of Accounting Income Numbers," arguably had a greater impact on the course of accounting research, directly and indirectly, than any other article during the second half of the twentieth century. Since that time, his innovative research has focused on issues that bridge accounting and finance, including the relationships between net profit reports and the stock market, the long-run performance of acquiring firms, statutory sanctions and voluntary corporate disclosure, and the politics and future of national accounting standards to name a few. This volume brings together the greatest hits of Brown's career, including several articles that were published in out-of-the-way places, for easier use by students and researchers in the field. With a foreword written by Stephen A. Zeff, and an introduction that discusses the evolution of Brown's

Bankruptcy prediction is one of the most important research areas in corporate finance. Bankruptcies are an indispensable element of the functioning of the market economy, and at the same time generate significant losses for stakeholders. Hence, this book was established to collect the results of research on the latest trends in predicting the bankruptcy of enterprises. It suggests models developed for different countries using both traditional and more advanced methods. Problems connected with predicting bankruptcy during periods of prosperity and recession, the selection of appropriate explanatory variables, as well as the dynamization of models are presented. The reliability of financial data and the validity of the audit are also referenced. Thus, I hope that this book will inspire you to undertake new research in the field of forecasting the risk of bankruptcy. During the past few decades the global auto industry has

concentrated into a small number of groups led by GM, Ford, Daimler-Chrysler, VW, Toyota, and Renault. The trend is of great political and economic significance because of the large size of the industry, its importance to the economic health of many countries, and its geographic spread around the globe. Many reasons are commonly cited when trying to explain this rapid corporate consolidation—cost savings, new products and markets, price controls, and labor negotiations chief among them. Frequently, however, mergers do not achieve their stated goals. Merging Traffic explores all these factors and goes on to suggest that, as with the mystique of the automobile itself, other motivations may prevail.

What manager is not anxious about the future? We live in a white-knuckled age of rapid technological change and global instability. But uncertainty is not the enemy, says management expert Paul J. H. Schoemaker. It is where the greatest opportunities are. To unlock these opportunities, however, requires a very different approach to strategy and implementation. In this pioneering book, Dr. Schoemaker presents a systematic approach that combines concepts such as scenario planning, options thinking, and dynamic monitoring to create novel strategies for profiting from ambiguity.

Building on his experience with more than one hundred consulting projects in fields ranging from health care to manufacturing, from utilities to financial services, Schoemaker shows how major corporations throughout the world have used his pathbreaking methodology to prepare for an uncertain future and profit from it. In this first comprehensive approach to the subject, Schoemaker shows the reader (1) how to develop and analyze multiple industry scenarios, (2) craft nimble strategies with just the right amount of flexibility, (3) implement them using an options approach, and (4) make real-time adjustments through dynamic monitoring. As a leading academic thinker and practitioner, the author draws on the frontiers of decision science, organization theory, strategy, and cognitive psychology

to integrate the most practical contributions these various fields have made to navigating uncertainty. More than any other capability, skill in seizing initiatives in shifting, unpredictable circumstances is the key to success. Profiting from Uncertainty provides a road map to do just that. This book was first published in 2002, well ahead of the mega turmoil that befell the world in 2008 and beyond. The methods and tools described here have been used by many companies and are even more relevant today than when originally published. You can't do without them.

In *The New Masters of Capital*, Timothy J. Sinclair examines a key aspect of the global economy—the rating agencies. In the global economy, trust is formalized in the daily operations of such firms as Moody's and Standard & Poor's, which continuously monitor the financial health of bond-issuers ranging from private corporations to local and national governments. Their judgments affect unimaginably large sums, approximately \$30 trillion in outstanding debt issues, according to a recent Moody's estimate. The difference between an AA and a BB rating may cost millions of dollars in interest payments or determine if a corporation or government can even issue bonds. Without bond rating agencies, there would be no standard means to compare risks in the global economy, and international investment would be problematic. Most observers assume that the agencies are neutral and scientific, and that they interpret their role in narrowly economic terms. But these agencies, by their nature, wield extraordinary power and exert massive influence over public policy.

Sinclair offers a highly accessible account of these institutions, their origins, and the rating processes they use to judge creditworthiness. Illustrated with a wide range of cases, this book offers a fresh assessment of the role of an often-overlooked institution in the dynamics of modern global capitalism.
